

ABOUT US

At CWS we are passionate about providing the best in drinking water solutions to our clients. To this end we offer the leading brands of POU Water Coolers (Point of Use), that allow you absolute confidence in your drinking water supply. Our coolers filter the water from your mains water supply, creating water much purer than any of the bottled water dispensing companies can provide.

The main advantage of these coolers when compared to a bottled dispenser is that they can save a typical office of 10-25 employees up to €1,000 per annum. We offer you the choice to rent the equipment, or purchase it outright. We offer Scheduled sanitisation twice annually, including replacement of purification assembly.

It is well documented that when employees drink adequate amounts of pure drinking water that their levels of concentration and work rate stay at a much higher level than employees that suffer dehydration of even 1% to 2%. This can cost a Company both in terms of lost productivity and ultimately money. These are just some of the additional benefits:

- No time wasted dealing with deliveries of bottled water.
- Eliminates having to store many bulky, heavy bottles.
- Reduces your Health & Safety risk exposure from manual handling
- Environmentally friendly.
- Delivers high quality chilled water on demand.
- Reduces the risk of drinking contaminated water.
- Less invoices to deal with.
- Ensures your company is complying with the latest health and welfare regulations at work S.I. No. 358 of 1995.
